**SUBJECT:** Minor amendment and sequence change to Mining Plan of Diamond K Gypsum in B and J No. 5, placer mining claim UTM# 212729, NW 1/4, SW 1/4, Sec. 29, T. 22 S., R. 9 E., SLBM

The opening of the gypsum rock deposit in the S/2 of B and J No. 5, claim in 1997 under an existing proposal submitted by Phi Palmer has resulted in the construction of an access road in the SW/4 of Sec. 29, and quarrying rock within one acre at location A. Palmer indicated that this quarry would expand Eastward just north of Salt Wash.

It now appears to be more desirable to develop another one acre quarry to the West at location B, before developing East of A. This will allow the timely stripping program for the area East of A. Guaranteeing DK a continuous source of gypsum through 1997, without further road construction. If it is determined that existing small quarry A, becomes depleted, DK will have B already uncovered and into production before any unforeseen crisis.

The quarry at location A will be backfilled, and possibly the location B, may be a backfilled reclaimed materials site.

**In Summary:** It is proposed to have two adjacent quarries each of one acre area in the SW 1/4 of Sec. 29, T. 22 S., R. 9 E.
